Microsoft AI Maturity Assessment Workshop

Deliver business value through AI, fast.

As Microsoft continues to invest in M365 Copilot and Bing Enterprise Search, AI capabilities will soon reach Azure too. Needless to say, generative AI is set to transform the way we work.

These tools are designed to deliver tangible and measurable value to your organisation. But realising these benefits requires commitment from business leaders and IT professionals. Key use cases should be defined, data access must be managed, and best practices need to be established through a collaborative approach.

With a well-defined adoption strategy in place, you'll see the business benefits of AI in no time.

AI MATURITY ASSESSMENT WORKSHOP

At Nasstar, we've developed our AI Maturity Assessment. This process will assist your stakeholders in defining use cases and help your technical teams build a Centre of Excellence for long-term AI management.

In our Assessment Workshop, we'll work with your nominated business representatives to capture the most compelling use cases and create your AI adoption roadmap.

HOW DOES IT WORK?

Our Prosci-qualified Change Management Team will guide you through the entire process. Kicking things off with a one-hour introductory call, we'll walk you through our approach and highlight industry-specific concerns we think you need to be aware of. We'll even help to select the stakeholders who will benefit the most from the process. Together, we will also create a customised workshop agenda, ensuring each step is tailored to your specific needs.

Our experts will examine use cases for:

» Individual staff members and explore ways to enhance their efficiency.

» Cross-functional teams to maximise the use of AI-enabled tools.

» Business units and processes that directly impact end users and revenue generation.

STAGE 1	STAGE 2	STAGE 3	STAGE 4	STAGE 5
Exploring	**Planning**	**Formalising**	**Scaling**	**Realising**
Raising awareness and reaching a common understanding on generative AI / Copilot and the workplace	Reviewing innovation opportunities to identify which high-value business problems to tackle first	Putting the governance guardrails in place to make sure your data is safe and zero-risk of oversharing	Implementing the first solution(s) in collaboration with business owners / users within the organisation	Upskilling business users to drive innovative solutions with their teams, peers and colleagues
CRAWL		**WALK**		**RUN**

KEY FEATURES

Business Value
Align your adoption strategy with business function and industry-specific priorities.

Governance
Establish clear decision-making processes and develop guidelines that align with your goals.

Use case mapping
Use workplace, cross-functional, and industry personas to create scenarios that match your needs.

Workflow management
Assess existing work backlogs to ensure business logic and data are AI-ready.
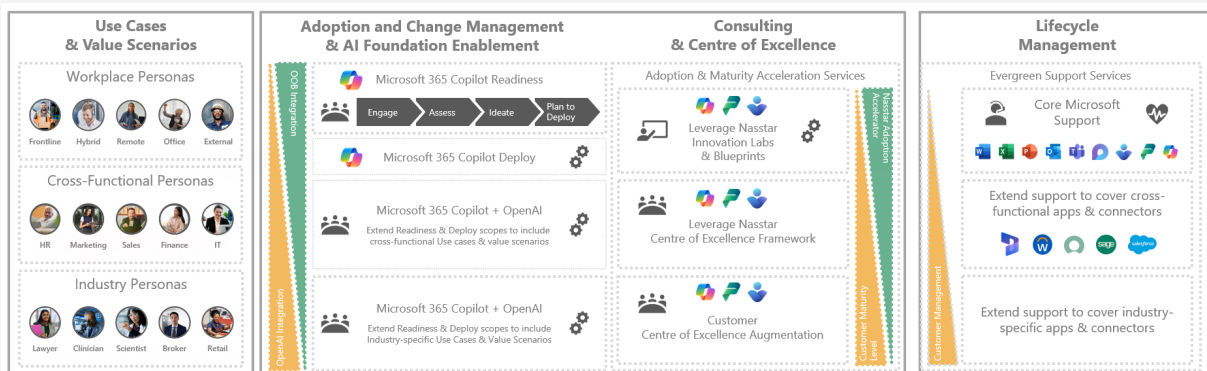

Acceleration services
Leverage Nasstar's Innovation Labs and Blueprints to speed up AI adoption.

Evergreen support
Extend support services to cover all Microsoft apps and third-party connections.

NASSTAR'S AI MATURITY ASSESSMENT

WHY NASSTAR?

Our AI Maturity Assessment will help you harness the power of generative AI as it's tailored to your specific needs and goals. Together, we'll plan how to integrate solutions like Microsoft 365 Copilot and explore ways to quickly upskill your employees. As your organisation reaches AI maturity, you can lean on our expertise to build systems that enhance your existing Microsoft services.

Partner with Nasstar to increase operational efficiency, generate new revenue streams, and differentiate your business in a fast-moving marketplace.
